

**FIG. 2**

Adey describes Figure 2 as follows:

“Each of the 7 larger circles in the central portion of FIG. 2 represents the outer edge of the imaginary enclosed area 56 of a corresponding plume 58 [shown in FIG. 5] at the intersection of the plume with the reaction surface of the cathode assembly. The circles . . . are instructive . . . regarding the ingress and distribution of oxygen into and out of air reservoir 52 [shown in FIGS. 1 and 5].” (Adey, col. 7, lines 55-62, emphasis added.)
